

*The origin

*People
and their handiwork

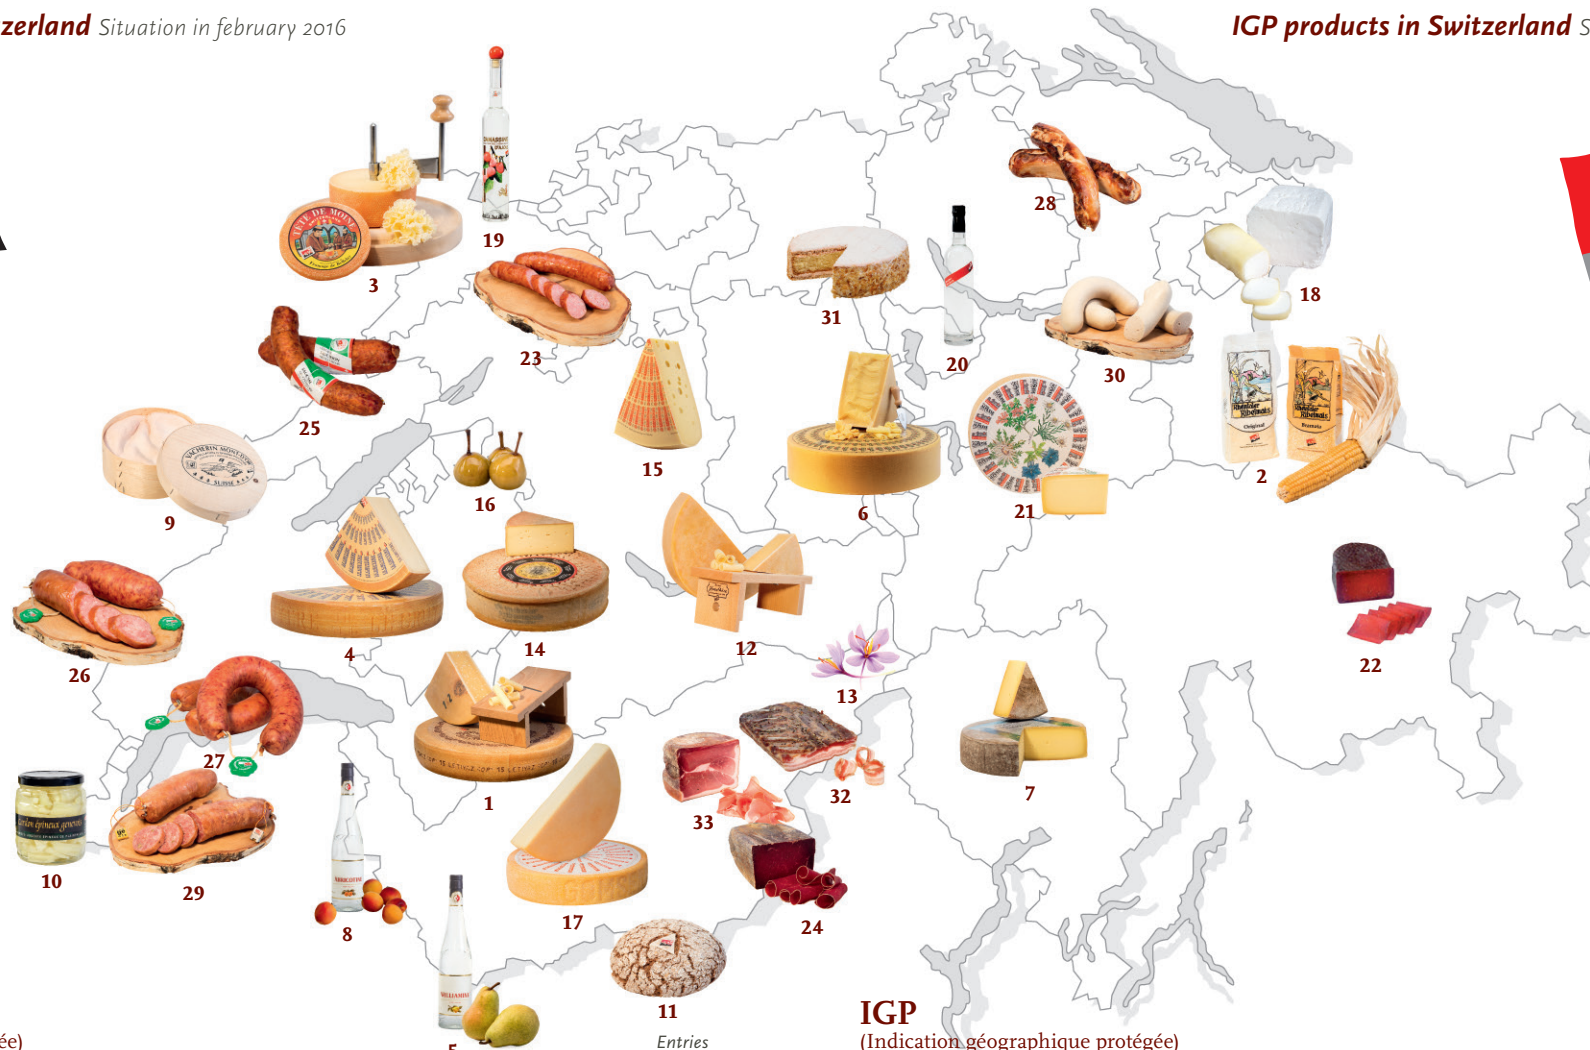

*The quality symbols

Switzerland. Naturally.

Tradition and origin is needed to produce AOP- and IGP-products, people and their handiwork. Only few Swiss products are manufactured in this way and are awarded the trademarked quality symbols AOP and IGP. www.aop-igp.ch

Walliser Trockenspeck IGP	02.10.15
33. Jambon Cru du Valais IGP	
Walliser Rohschinken IGP	02.10.15

* Bündnerfleisch IGP does not necessarily have to be produced from Swiss meat. For this reason the logo with the Swiss cross may not be used.

◇ This product does not belong to the Swiss AOP-IGP Association and so cannot bear its logo.

To choose a product with a protected designation of origin (AOP) or a protected geographical indication (IGP) is, above all, to give oneself a treat. At the same time such a choice promotes traditional craft and sustainable development. Swiss AOP and IGP products form part of the rich culinary and cultural heritage of our country.

AOP – specialities with guarantee of origin

AOP (appellation d'origine protégée) is a protected designation of origin which guarantees that everything, from the raw materials to the production process, comes from a clearly defined region of origin. Moreover, the product has to have been manufactured according to traditional methods.

IGP – traditional specialities

The IGP label (indication géographique protégée) is for products with a protected geographical indication. This means that the speciality has either been produced, processed, or refined in the place of origin. The raw materials used are 100 % Swiss in origin.

Specialities with character

AOP and IGP products are entered in the federal register of protected designations of origin and protected geographical indications respectively. This register protects the regional names or traditional designations of agricultural products, the quality and main characteristics of which are determined by their place of origin (wines are protected at cantonal level). If a name is registered, it may only be used by the producers of the geographical region designated. These producers must adhere to a strict list of specifications. The list of specifications is approved by the Federal Office of Agriculture, and regular checks by an independent body ensure that they are adhered to.
